PROFESSIONAL EXPERIENCE

CTO, KeystoneGTM Inc. 

Aug 2025 – Present | Bengaluru, India

- Owned KeystoneGTM's **engineering end-to-end**, turning fragile n8n flows and backend APIs into **reusable platform services** that helped scale AI-led client engagements by **3x+**.
- Developed **KEYSET**, an **AI agent platform** with skill packaging, a registry (auth + access control), a cloud runner, and desktop/web apps so business users and stakeholders could run assigned agents without CLI setup or technical onboarding.
- Built the cloud runner for **long-running AI workflows** with autonomous execution, **pause/resume with saved state**, Slack approvals when human input is needed, and recovery from transient agent failures.
- Shipped a **live Customer Success system** for a Series A SaaS client that ingests meeting transcripts (Oliv) and HubSpot context, and produces **account health scores, risk signals, and owner-assigned action items**.
- Expanded the CSM data layer to **OpenSearch + Postgres** (call history, product usage, CRM integration health) and a **web board** for managers to review accounts at risk, drill into product gaps, and track follow-ups.
- Exposed CSM tasks to **Claude Desktop via MCP** (list/update tasks, pull account context and evidence, draft follow-ups), letting CSMs act from within their Claude sessions.

Co-founder & CTO, Stackbrains 

Jun 2024 – Jul 2025 | Singapore

- Co-founded and led the startup as CTO, successfully raised **\$125K pre-seed funding** from **Antler SEA**, building a **data observability platform** for the modern data stack.
- Designed and developed a **full-stack platform** enabling data teams to monitor schema changes, data quality, and pipeline failures, preventing blind spots and improving **trust on data**.
- Integrated an **AI-assistant** to help with **root cause analysis**, generate **custom monitors**, and provide **actionable guidance**, streamlining issue resolution and decision-making.
- Partnered with large-scale social media platform (**30M+ users**) to automate **real-time gaming revenue tracking**; reduced reconciliation time from **2 weeks to 1 day** with **100% transaction-level accuracy**.
- Worked cross-functionally with the **CEO and commercial team** to validate customer needs, tailor product features, and **shape the product narrative** during GTM and investor engagements.

Entrepreneur in Residence - SG15, Antler 

Oct 2023 – Dec 2023 | Singapore

- Led product and tech execution as **Chief Technology Officer** for a visibility platform in the Non-Containerised ocean freight space; **successfully qualified** for **Antler's pre-seed** funding in the final round.
- Developed a data exploration **MVP** with universal search, dynamic filters, and report generation; integrated **EDI** data ingestion over **SFTP** using **AWS S3** and a purpose-built parser for Non-Containerised freight data.
- Collaborated on multiple venture ideas across AI, carbon credits and digital assets, **winning recognition** in Antler's Idea Validation Bootcamp.

Senior Software Engineer, Triple A 

Dec 2022 – Sep 2023 | Singapore

- Streamlined pre-payment verifications by migrating `Know Your Customer` components to an independent service with **Typescript** and **Express**, enabling **300k transactions per week**.
- Built microservices in **Go** to monitor transaction health across multiple blockchains; integrated with core service using **Protobuf** and **RPC** to optimize real-time payment processing.
- Optimised settlements and reporting by creating utilities in **Node.js** atop **Express** framework to reconcile transactions and identify suspected transfers.
- Maximised core product reliability by expanding test coverage with **Mocha-Chai** library and **Restify** framework.
- Assisted support team with triaging customer queries and provided with RCA for specific issues.

Senior Software Engineer, Portcast 

Feb 2019 – Dec 2022 | Singapore

- Scaled **Container Tracking Visibility** by optimising core components and architecting data pipeline for aggregating multiple data sources to provide **real-time predictions** for Vessels and containers across the globe.
- Provided clients with a dashboard in **Vue.js** webapp showcasing end-to-end container activity status. Increased product engagement by **84%**.

- Refactored the core backend apis in **Flask** and re-architected data infrastructure to improve real time vessel tracking and api performance using **Hasura** with **AWS lambda** functions.
- Created micro-services in **FastAPI** for data serialisation and handling data across multiple sources, making ingestion scalable and independent from core product, achieving increased velocity in testing external data sources integrations.
- Optimised target asset search in the webapp on tracking pages by integrating **Typesense**.
- Helped Data Science team with end-to-end simulated testing on live data for experimental and beta models to analyze predictions and integrating **AWS sagemaker** in prediction engine resulting in faster and better decisions around **feature engineering**.
- Upgraded logging and monitoring platform with **ELK** stack atop **AWS Opensearch service** building visualizations for the KPIs and analytics dashboards.
- Assisted in scaling team with updating the DevOps tooling by automating **CI/CD with Gitlab** and providing auto alerts for accuracy and coverage, introduced task management system - **ClickUp**, providing better product management and transparency.
- Led, trained and groomed a diverse team across software engineering, data engineering and dev-ops.

Software Engineer, Searchtax

May 2018 – Feb 2019 | Gurgaon, India

- Integrated **GCP** for creating Solr deployments, using **Django Rest framework, Terraform and Ansible**.
- Extended **Azure** and **AWS** cloud integrations components with scaling and descaling feature based on deployments performance metrics.
- Updated monitoring module of the product by adding more performance triggers enabling clients to set more granular controls over the state of deployments.
- Implemented **critical Disaster Recovery feature** for premium tier clients and generated triggers to automate the process.

Software Developer, Stashfin

Nov 2017 – May 2018 | New Delhi, India

- Extended Internal portal to orchestrate & manage the various Customer Journeys of a loan applicant developed in **LAMP** stack.
- Developed micro-service using **Python Tornado Framework** to generate real time amortisation schedule for dynamic ROI between multiple lenders.
- Integrated 2 additional credit bureaus to improve eligibility checking of an applicant.
- Led optimisation of infrastructure and redesigned performance sensitive components of backend with **Django** and **MySQL**.

Software Developer, Overcart

Mar 2017 – Aug 2017 | Gurgaon, India

- Developed end-to-end feature with **Django** and **JQuery** allowing sellers to upload returns stock from Amazon marketplace directly onto Overcart platform, in 1 click.
- Enabled Auto QC machine for checking the internals of refurbished phones. Main hardware components were **HerkuleX** servo motors, **Arduino, Mpu9150** sensors, controlled by **Raspberry-pi** board.
- Increased efficiency of Quality Checks by **53%** by reducing the time for each test from **7 mins to < 4 mins**; resolved frequent & intermittent communication failures by replacing raw sockets with **MQTT** protocol using **python Paho** library.
- Enabled machine to conduct multiple tests, perform auto-reset and publish results to Inventory & Dashboard APIs.

EDUCATION

Manipal University Jaipur

Aug 2014 – Jul 2016 | Jaipur, India

- **Masters In Technology in Computer Networks and Information Security**
- Secured CGPA: **7.83** (out of 10)

SKILLS

Languages/Frameworks

Python, Go, TypeScript, JavaScript, FastAPI, Django, Flask, Express, React, Vue.js

CloudOps

AWS, Azure, GCP, Terraform, Pulumi, Ansible, Docker, Zabbix

Databases

PostgreSQL, MySQL, Redis, MongoDB, OpenSearch
